Avg CO2 Saved / Device (Tons)

Total CO2 Saved vs. Avg CO2 Saved/Device By Region

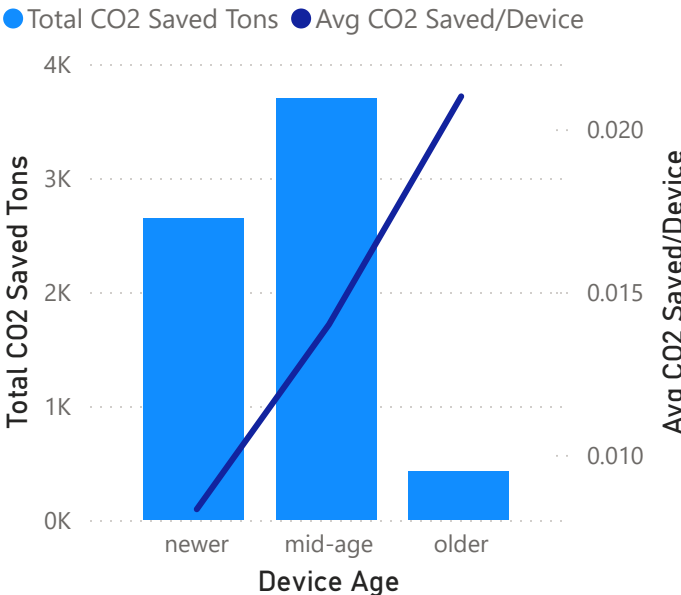

Total CO2 Saved vs. Avg CO2 Saved/Device By Device Type

Per-device CO₂ savings are **nearly identical across device types** (~0.011 tons). Laptops dominate total impact through volume, not efficiency.

Total CO2 Saved vs. Avg CO2 Saved/Device By Device Age

Recommendation:

Older devices save ~2.5× more CO₂ per unit but make up only 3% of volume. Maintain the high-volume laptop pipeline that drives current totals, while sourcing more older laptops especially in Asia, where per-device savings are highest.
